

## Powering success in BPCI-A

*Ranked the #1 solution for bundled payment program management<sup>1</sup>*

### About our BPCI Advanced solution:

- **COMPLETE DIAGNOSTIC ASSESSMENT**  
Drawing on Clarify's proprietary dataset which includes all identified Medicare claims (Parts A, B, and D) we provide an analysis of provider and market data to inform likely performance and recommended episode participation.
- **PERFORMANCE & CHANGE MANAGEMENT**  
We identify areas for improvement on a fully case-mix adjusted basis and provide real-time clinical transformation support.
- **PATIENT IDENTIFICATION & STRATIFICATION**  
We predict patient BPCI-A eligibility upon hospital admission and provide initial risk stratification to inform optimal care delivery.

### Our analytics and clinical team enable you to:

- **Make an educated enrollment decision** by targeting which episodes make sense given projected performance.
- **Prepare for program launch** by understanding where to invest early in care redesign and clinical behavior change.
- **Tackle opportunities for improvement** by identifying areas of unwarranted financial and clinical performance variation.
- **Track financial performance** by comparing spend to Clarify-predicted target price for each patient as they receive care.
